

Security Vulnerability Report

Executive Summary

Scan Overview:

- Scan ID: testscan1
- Date: 2025-11-08T00:00:00Z
- Files Scanned: 1
- Total Vulnerabilities: 1

Severity Breakdown:

- Critical: 0
- High: 1
- Medium: 0
- Low: 0

Vulnerability Summary

File	Line	Type	Severity	CWE
example.py	12	xss	High	CWE-79

Detailed Vulnerability Findings

Finding 1: xss

File: example.py

Line: 12

Severity: High

CWE ID: CWE-79

Detection Tool: Semgrep

Confidence: 90%

Description:

Reflected XSS in output rendering

Code Snippet:

```
<script>alert(1)</script>  
print('vulnerable')
```

AI-Generated Recommendations

- Implement parameterized queries for all database operations to prevent SQL injection
- Use environment variables for storing sensitive configuration data
- Implement proper input validation and output encoding
- Use strong cryptographic functions (bcrypt, scrypt, or Argon2) for password hashing
- Regular security code reviews and automated scanning
- Keep dependencies updated and monitor for known vulnerabilities
